

## WELCOME

As we approach 2020 we consider how our human interaction is necessary and complementary to technology within the practice of Program and Project Management. We know technology doesn't bring project success and that experienced practitioners are required to consider the complex cultural environments, make sense of them and add value.

This is evident in the workshops held with Development Victoria, where participants are enabled to engage with their stakeholders, develop and refine a workable plan. The end output from these sessions is a Gantt Chart, a tried and tested system developed over 100 years ago, but in this edition, we pose the question, what will be the next PM evolution/ revelation that can stand the test of time?

We also take a look at PSA Project's involvement in the remote community of Utopia, NT working with the community projects ranging from Housing to Art Centre and Community Developments. This has also seen synergies with other NT work and the application of modular buildings for the remote locations.

We also announce some new projects we are working on and the influence of technology and the long-term solutions to the end user, whether it be in the facilities and equipment of the Sport Science Building at Federation University or Data Centre Buildings for NEXTDC. And we are excited to introduce you to our latest recruits to the PSA Project Office, Annaliese and Lucinda.

## PROJECT NEWS

### PSA IMPROVING PM PRACTICES FOR NEXTDC

With more and more data being held in cloud storage, NEXTDC, Australia's leading independent data centre operator, sees an increased need to expand and has looked to PSA Project to provide best practice project-programme management support.
